Zen Buddhist Practice

- A Zen Buddhist Koan can be a dialogue or question, story or statement
- Designed to test a student's progress
- “What is the sound of one hand clapping?”

Where to start?

Where to start?

- Other fundamental Alfresco concepts:
 - Nodes
 - Stores
 - Types
 - Aspects

Progressive learning

Self contained lessons*

- The aim is to ensure that each test class helps a student learn part of the API
- Each test case should be encapsulated

* *Well they might need to read the JavaDoc*

BeeCon 2016
iXxUS

Executable lesson

- BDD Given-When-Then stories would be ideal
 - E.g. EasyB

```
given "a store identifier", {  
    storeRef = new StoreRef("foo://bar")  
}  
  
when "the store is created", {  
    // your code goes here  
  
}  
  
then "the store should exist", {  
    nodeService.exists(storeRef).shouldBe true  
}
```

- Opted for JUnit tests

Executable lesson

- BDD Given-When-Then stories would be ideal
 - E.g. EasyB

```
given "a store identifier", {  
    storeRef = new StoreRef("foo://bar")  
}  
  
when "the store is created", {  
    // your code goes here  
  
}  
  
then "the store should exist", {  
    nodeService.exists(storeRef).shouldBe true  
}
```

- Opted for JUnit tests

Why JUnit?

- Familiarity
 - Teaching Alfresco
 - Without requiring them to learn Groovy / EasyB
- Lower barrier of entry
 - For students
 - And contributors

JUnit

Execution

- Students clone the repository
- Complete the test case by adding their code between the markers
- Execute `'mvn test'`
- Sit back and bask in the glory
 - Or learn from the failure and correct the code

T E S T S

Running com.ixxus.koans.alfresco.cmr.repository.Koan1Test
Tests run: 3, Failures: 3, Errors: 0, Skipped: 0, Time
elapsed: 0.114 sec <<< FAILURE!

Results :

Failed tests:

testWellKnownStore(com.ixxus.koans.alfresco.cmr.repository.
Koan1Test): Ref mustn't be null, have you implemented your
code snippet yet?

testCafeBabeStoreRefString(com.ixxus.koans.alfresco.cmr.rep
ository.Koan1Test): Have you set the store string?

testFooBarStoreRef2Strings(com.ixxus.koans.alfresco.cmr.rep
ository.Koan1Test): Have you set the protocol?

BeeCon 2016
iXXUS

Starting with the StoreRef

```
@Test
public void testFooBarStoreRef2Strings() {
    StoreRef ref = null;

    // You can construct a StoreRef with two Strings
    String protocol = null;
    String identifier = null;

    // YOUR CODE STARTS HERE

    // YOUR CODE FINISHES HERE

    assertNotNull("Have you set the protocol?", protocol);
    assertNotNull("have you set the identifier?", identifier);
    ref = new StoreRef(protocol, identifier);
    assertEquals("The store ref is wrong", "foo://bar", ref.toString());
}
```

Starting with the StoreRef

```
@Test
public void testFooBarStoreRef2Strings() {
    StoreRef ref = null;

    // You can construct a StoreRef with two Strings
    String protocol = null;
    String identifier = null;

    // YOUR CODE STARTS HERE

    // YOUR CODE FINISHES HERE

    assertNotNull("Have you set the protocol?", protocol);
    assertNotNull("have you set the identifier?", identifier);
    ref = new StoreRef(protocol, identifier);
    assertEquals("The store ref is wrong", "foo://bar", ref.toString());
}
```
